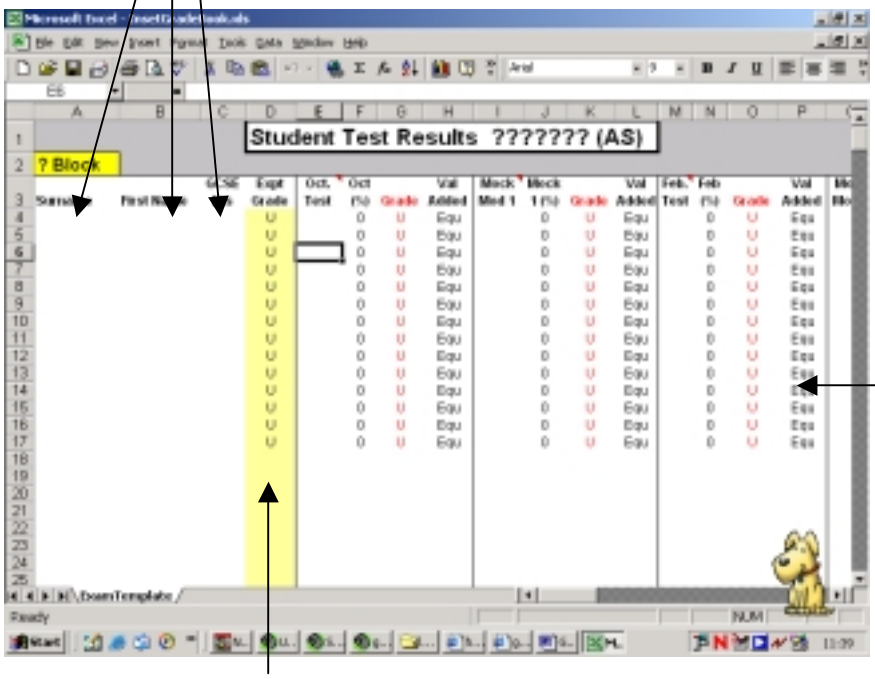
gc LSDA Project

Using the Student Grade book

The student grade book has been set up to allow teachers a template for adding new students each year and having exam results automatically graded and value added calculated.

The first thing to do is manually add the students names and GCSE scores – the spreadsheet will automatically produce an expected grade based on current Greenhead guidance.



The Greenhead grade boundaries are contained in another part of the spreadsheet. In columns U and V both the GSCE expectations and test boundaries are held, and these can simply be edited if either set of boundaries change. Thereafter it is simply a matter of adding test results and grades will be produced automatically – there is also an indication of whether value has been added by comparing expected result with actual result.

To add extra students use insert row at the top of the list (not at the bottom – the grade boundary definition will not pick it up) and then copy the formulas from the row below).
